DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on 2/17/09 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of USP 7,464,628 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

Claims 1-11 are allowed.

Regarding independent claims 1 and 8, the closest prior art to the instant invention is Ozawa (JP 11-10405A).

OZAWA teaches an automatic lathe comprising: a head stock (3) configured to move forward and backward (along Z-axis); a spindle rotatably supported on the head stock and having a hole which allows a rod-like material (9) to be inserted therethrough; the tool post equipped with the tool (12) to machine the material gripped by a chuck (11) of the spindle; a guide bush support table disposed closer to a tip side of the spindle than the head stock; support table fixing means for positioning and fixing the guide bush support table at a specified position on a bed; a guide member; a rotatable a guide bush support table and a guide bush (7) detachably fitted to a tip of the guide member ('405, figure 1). OZAWA also teaches spindle moving means for moving the spindle forward and backward along the z-axis.

However, regarding independent claims 1 and 8, OZAWA fails to anticipate or make obvious the spindle moving forward and backward inside the guide member. OZAWA also fails to anticipate or make obvious rotation transmission means for transmitting rotation of the guide member to the spindle. Furthermore, OZAWA fails to anticipate or make obvious positioning and fixing the spindle at a specified position on the guide bush support table such that it doesn't move forward and backwards when the guide bush is removed from the guide member. Additionally, regarding claim 8, OZAWA fails to anticipate or make obvious the head stock being coupled to the guide bush support table by coupling means when the guide bush is removed from the guide member.
